

Table of contents

The scales of experience: Introduction to the special issue Experiencing the global environment

Lino Camprubí, Philipp Lehmann

Pages 1–5

Experiencing deep and global currents at a ‘Prototypical Strait’, 1870s and 1980s

Lino Camprubí

Pages 6–17

Experiential and cosmopolitan knowledge: The transcontinental field practices of the U.S. Bureau of Biological Survey

Jeremy Vetter

Pages 18–27

Re-situating fieldwork and re-narrating disciplinary history in global mega-geomorphology

Etienne S. Benson

Pages 28–37

Average rainfall and the play of colors: Colonial experience and global climate data

Philipp Lehmann

Pages 38–49

Earthquake prediction, biological clocks, and the cold war psy-ops: Using animals as seismic sensors in the 1970s California

Elena Aronova

Pages 50–57

Can animals predict earthquakes?: Bio-sentinels as seismic sensors in communist China and beyond

Fa-ti Fan

Pages 58–69

Human bodies as chemical sensors: A history of biomonitoring for environmental health and regulation

Angela N.H. Creager

Pages 70–81

Afterward: Humboldt was Right

M. Norton Wise

Pages 82–86
